PROFESSIONAL SUMMARY

Computer Science and Business Administration dual-degree student with hands-on experience building AI and machine learning systems using Python, PyTorch, LangGraph, RAG, and LLMs. Built end-to-end projects spanning agentic AI, model evaluation, NLP, data pipelines, and reliable AI workflows, with additional experience in AWS, Docker, SQL, and CI/CD. Strong interest in building secure, scalable, and reliable AI-enabled software.

EDUCATION

Universidad de Alicante — Alicante, Spain
Double Degree in Computer Science + Business Administration. — *Expected 2028*

University of North Florida — Jacksonville, FL, USA
International Exchange — Business Administration. — *Jan – Apr 2027*

Tecnológico de Monterrey — Monterrey, Mexico
International Exchange — Computer Science & Business Administration. — *Jan – Jun 2025*

Politechnika Lubelska — Lublin, Poland
International Exchange — Computer Science. — *Jan – Jun 2024*

EXPERIENCE

Data Science & Business Consultant — Sep 2025 – Jun 2026
Gil y Pineda — *Alicante, Spain*

- Built Python/SQL workflows for reliable collection, cleaning, and structuring of business data.
- Analyzed real-world datasets to identify patterns and support data-driven decision-making.
- Automated recurring data-processing tasks, reducing administrative processing time by 40%.
- Communicated technical findings clearly to non-technical stakeholders and business users.

PROJECTS

Ralue — AI-Powered Career Intelligence Platform resumin-rose.vercel.app
TypeScript, Node.js, Supabase, WOPI, LLMs

- Architected and built an AI-powered career platform that unifies professional activity into a continuously evolving master profile and role-tailored resumes.
- Engineered browser-based document editing through WOPI, with real-time collaboration, versioned persistence, and concurrency-safe save workflows.
- Built a fault-tolerant LLM pipeline that translates natural-language requests into schema-validated document actions, detects unsupported or invalid outputs, and automatically repairs or retries them.
- Developed bilingual job-intelligence workflows for semantic matching, skill-gap detection, ATS analysis, and candidate-role compatibility scoring.

FinSight — Agentic Financial Research System github.com/lmg136-ua/finsight
Python, LangGraph, RAG, LLMs, Streamlit

- Developed an agentic financial research system using LangGraph, RAG, and LLMs to analyze SEC filings.
- Built multi-document retrieval, financial calculation tools, and an evidence-verification loop for grounded, cited answers.
- Created an evaluation pipeline for retrieval quality, citation coverage, and groundedness, with a Streamlit interface.

Dynamic Portfolio Optimization using Deep Reinforcement Learning — Final Degree Project github.com/lmg136-ua/gated-ppo-portfolio-optimization
Grade: 10/10

- Built an end-to-end Python/PyTorch pipeline on 100 S&P 500 stocks (2010–2024), covering feature engineering, model training, and evaluation.
- Developed a gated PPO agent for dynamic portfolio allocation using market and macroeconomic data, adaptive rebalancing, and risk constraints; benchmarked against five classical strategies.

SKILLS

AI & ML: LangGraph, RAG, LLMs, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy
Programming: Python, JavaScript/TypeScript, C/C++, Java, SQL
Data & Cloud: PostgreSQL, MySQL, MongoDB, AWS, Supabase
Tools & DevOps: Git/GitHub, Docker, Kubernetes, CI/CD, Unix/Linux
Languages: Spanish (native), English (professional working proficiency)
